Open Project In Xcode

Steps To Open Project In Xcode

1. Open Goferjek Provider Folder
2. Right Click “Goferjek Driver.xcworkspace” file
3. Select Open with
4. Choose Xcode

Reference Below

Updating Google Map SDK API Key

- Get Google Map API key and use it to authenticate various types of Web Application, Mobile Application.

Reference Below

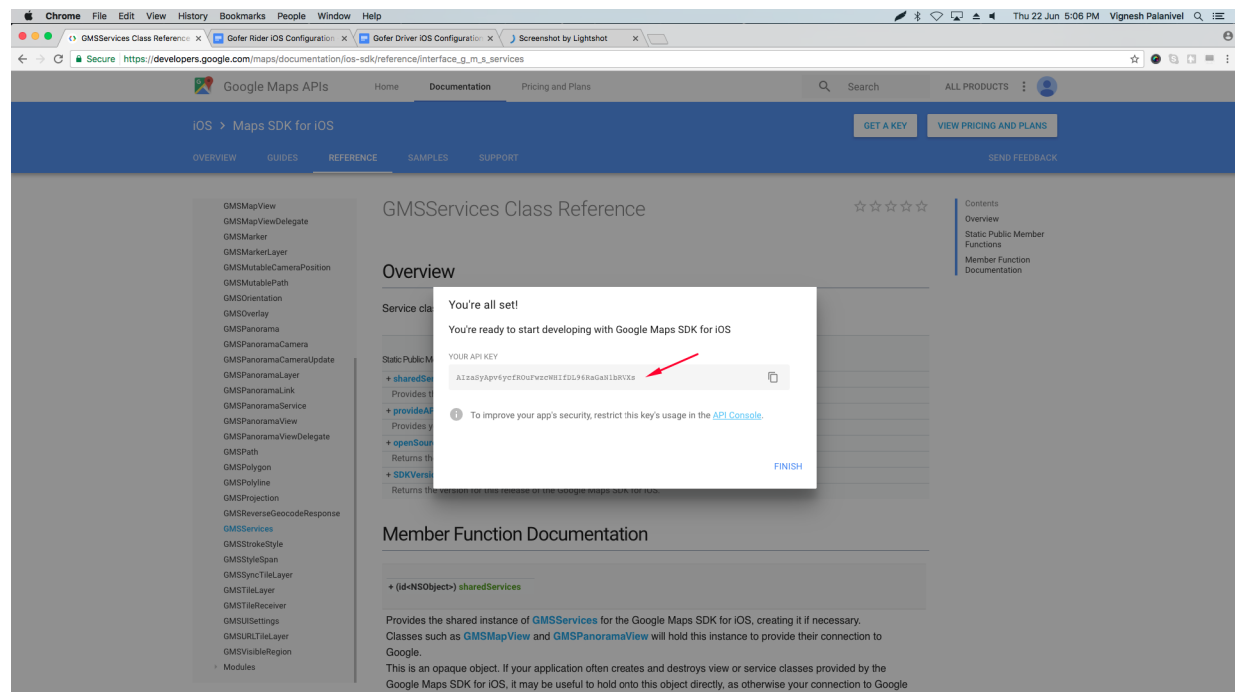

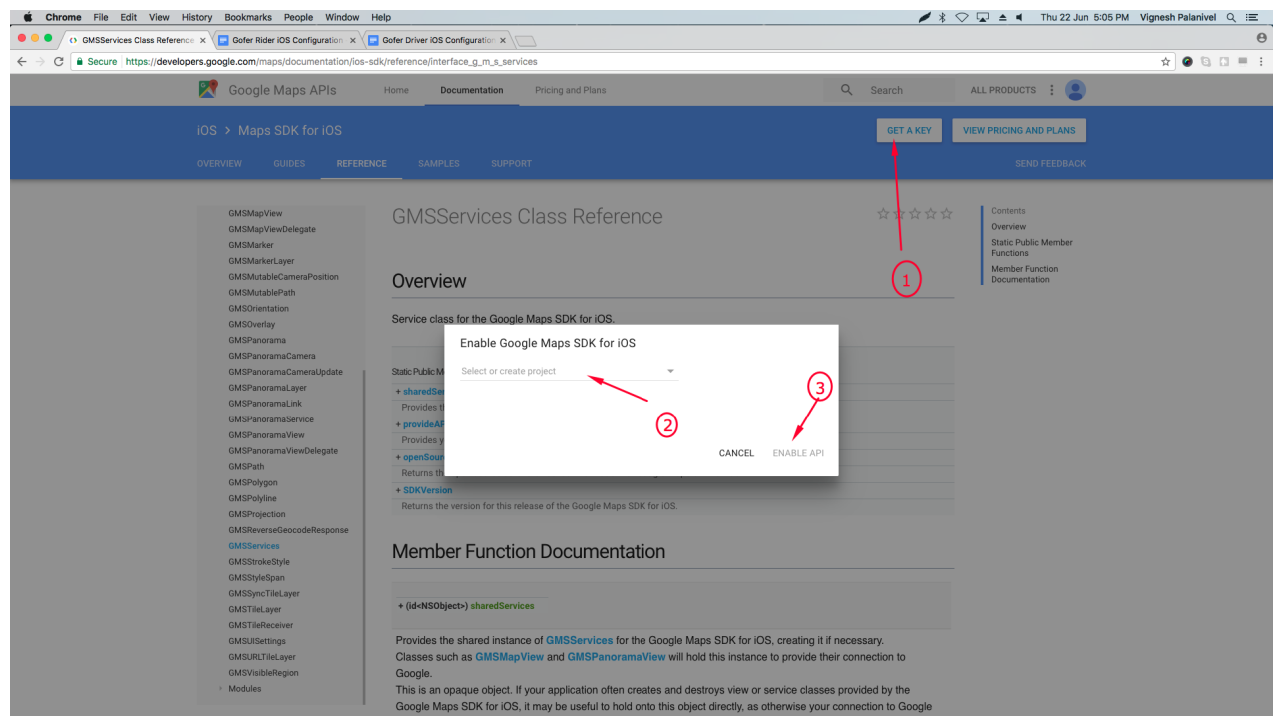

Getting Google Map SDK key

https://developers.google.com/maps/documentation/ios-sdk/reference/interface_g_m_s_services

Steps To Getting Google Map SDK key

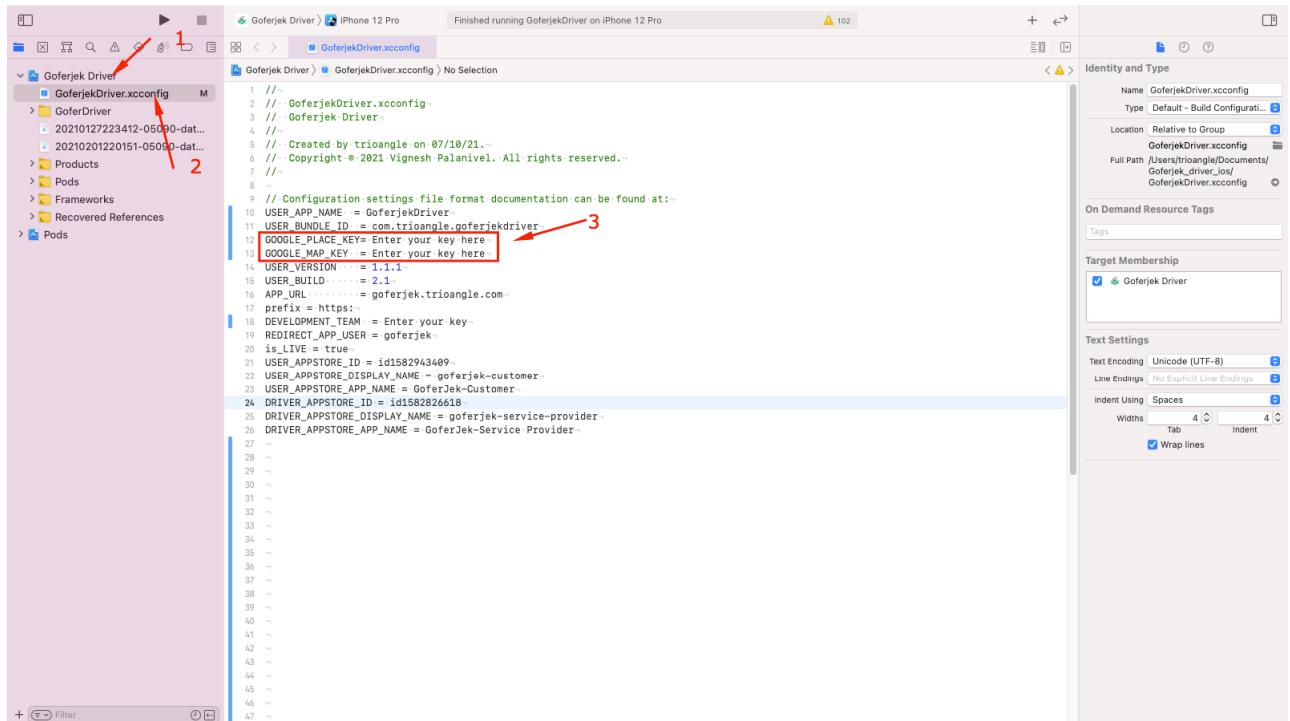

1. Click GET AKEY
2. Type / Select App Name
3. Click Enable API
4. Copy API key

Paste API key in Xcode Project

Steps To Paste API key in Xcode Project

1. Click file folder in xcode and Click “Goferjek Driver”
2. Open GoferjekDriver.xcconfig file
3. And, paste Your Google Key in “GOOGLE_PLACE_KEY” and “GOOGLE_MAP_KEY”(Live and demo)

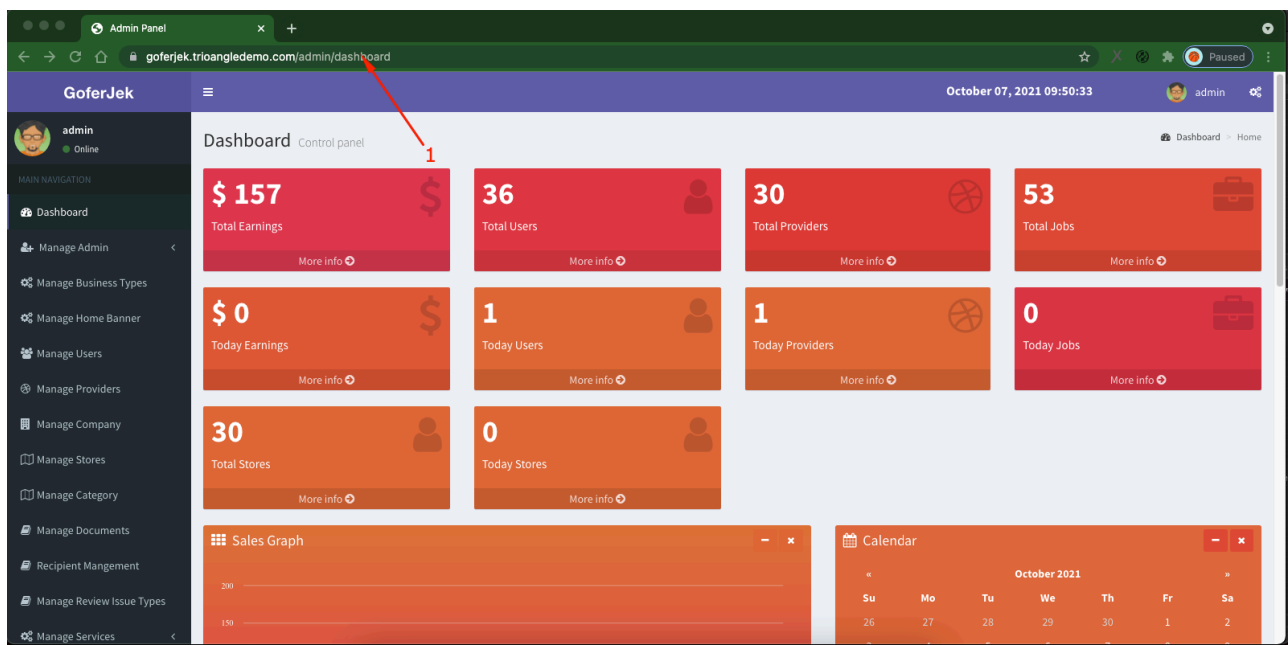

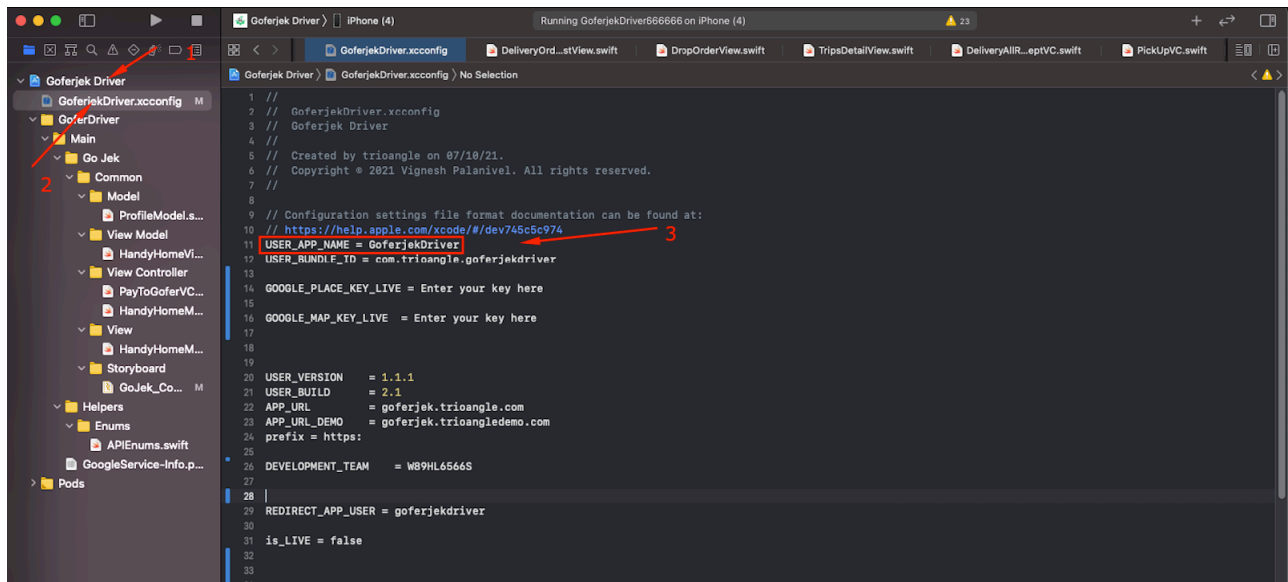

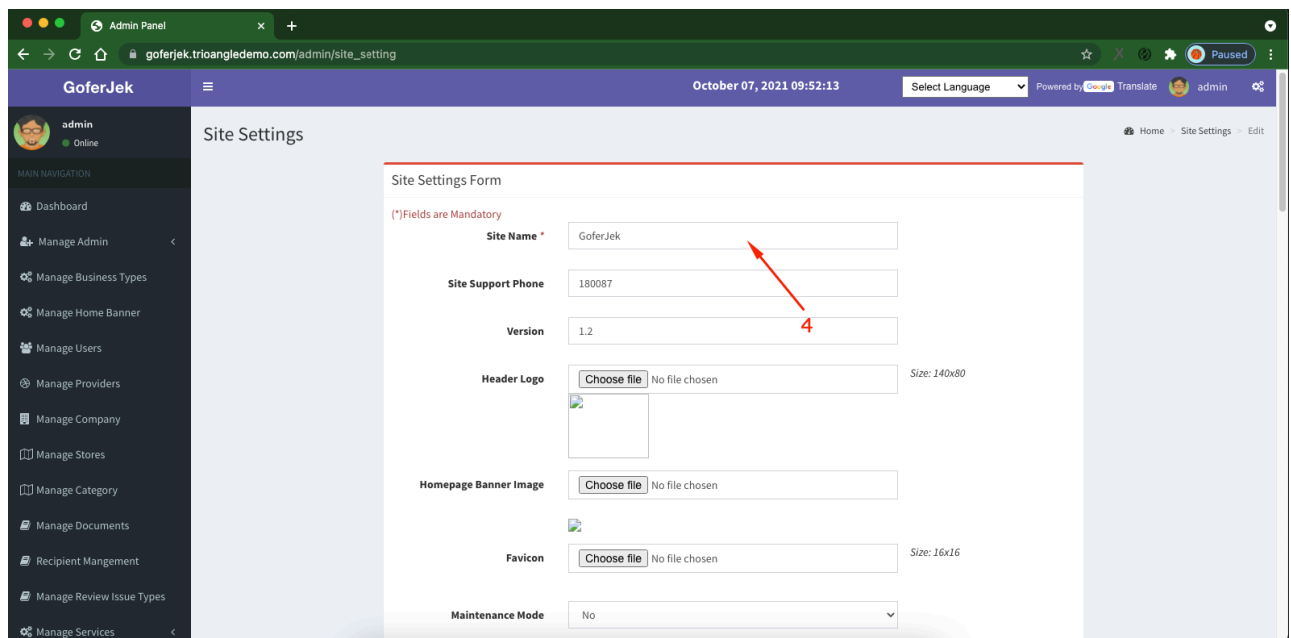

Updating App name

Steps For Updating App name

1. Click Goferjek Driver Project
2. Open GoferjekDriver.xcconfig file
3. Change display name in “USER_APP_NAME” key
4. Change app name in admin panel → Click Manage Site Settings → Click Site Settings → Enter Your App Name in Site Name field.

Reference Below

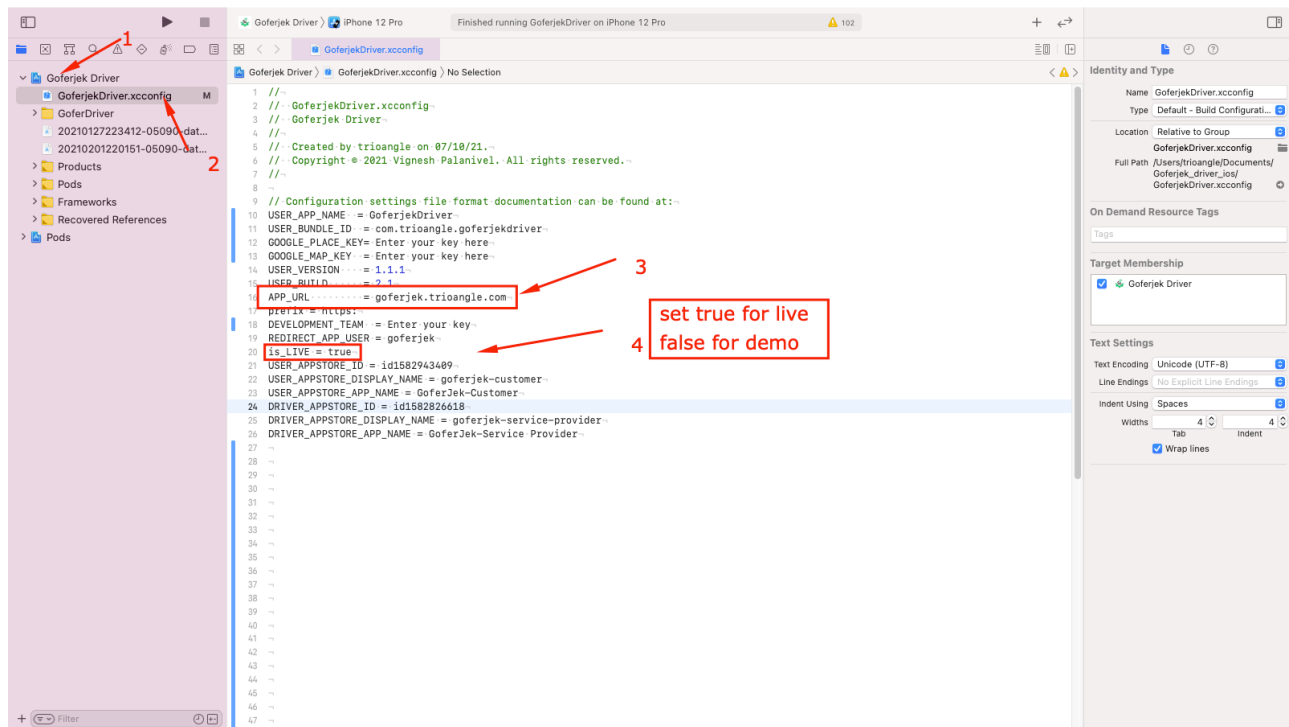

Updating Live URL

Steps To Update Live URL

1. Click file folder in xcode and Click “Goferjek Driver”
2. Open GoferjekDriver.xcconfig file
3. And, Change Your Live Url in “APP_URL” key
4. Finally Set “is_LIVE” value true.

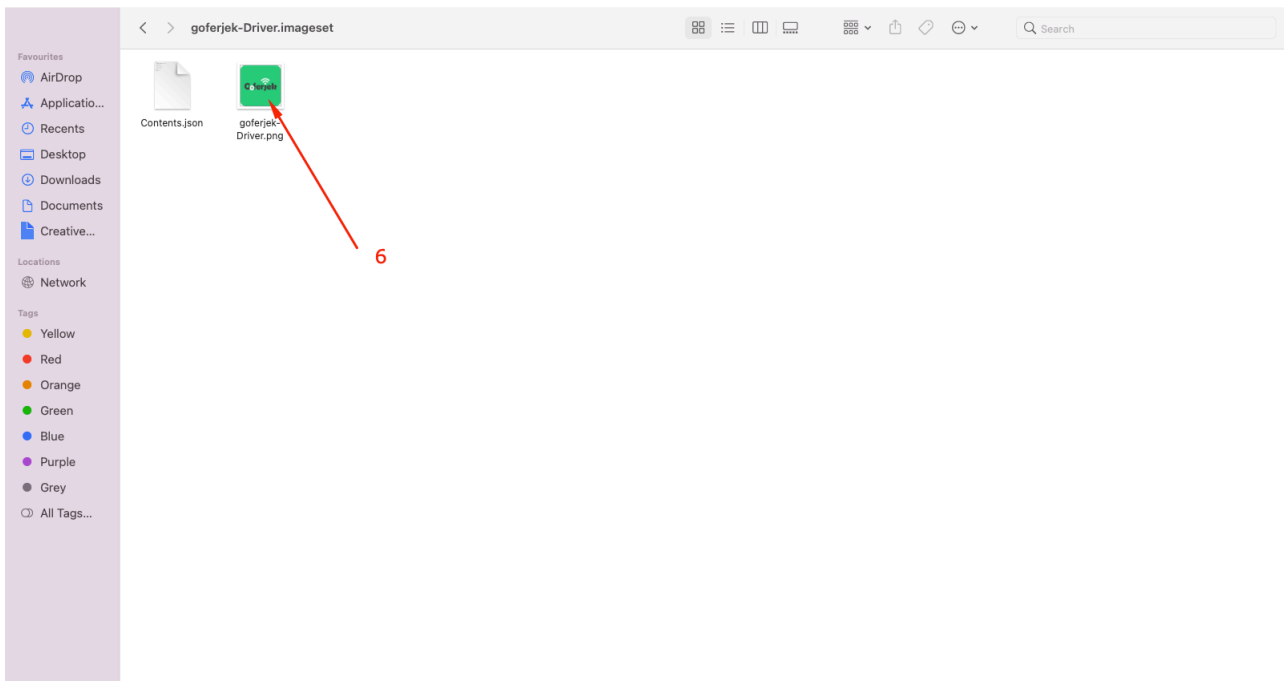

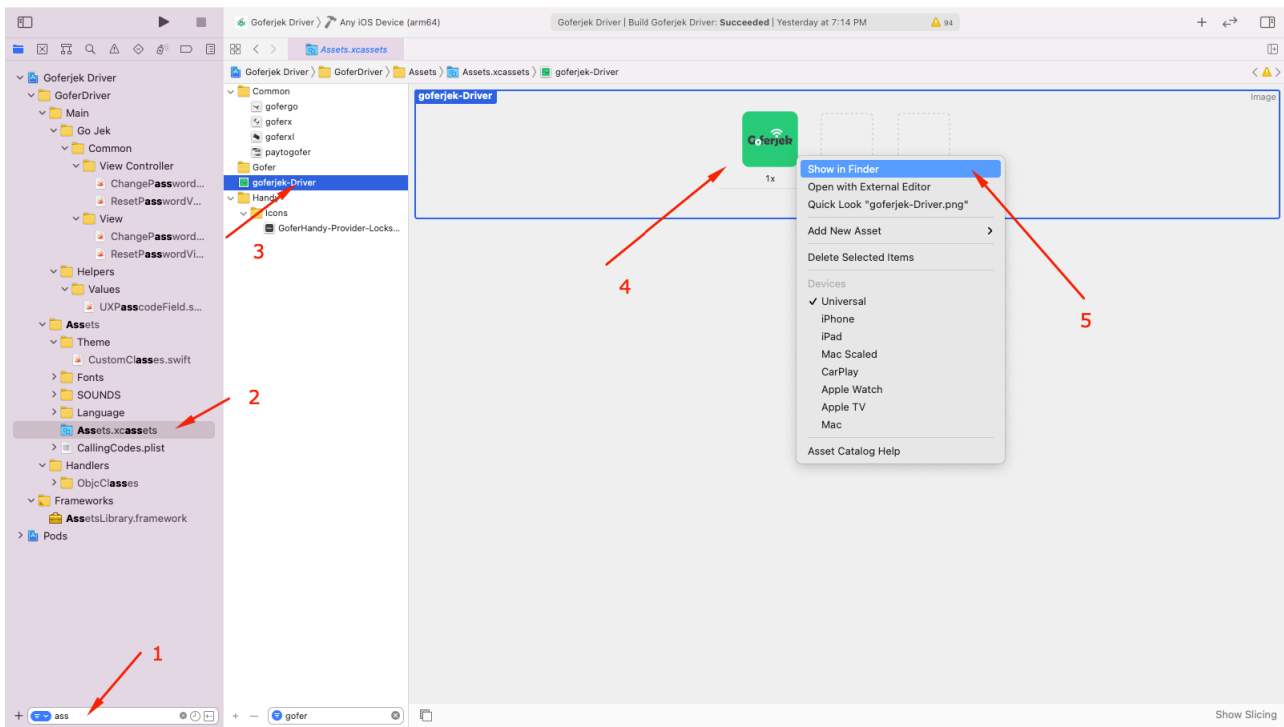

Updating APP Logo

- Modifying App Logo

[Note: Do not use transparent png image for logo]

1. Search for assets
2. Select Assets.xcassets
3. In Assets search for goferjek Driver
4. Right click the goferjek Driver.png and Click “Show in finder”
5. Open the folder
6. Replace the image
(Note: Don't Change the Image Name)

Reference Below

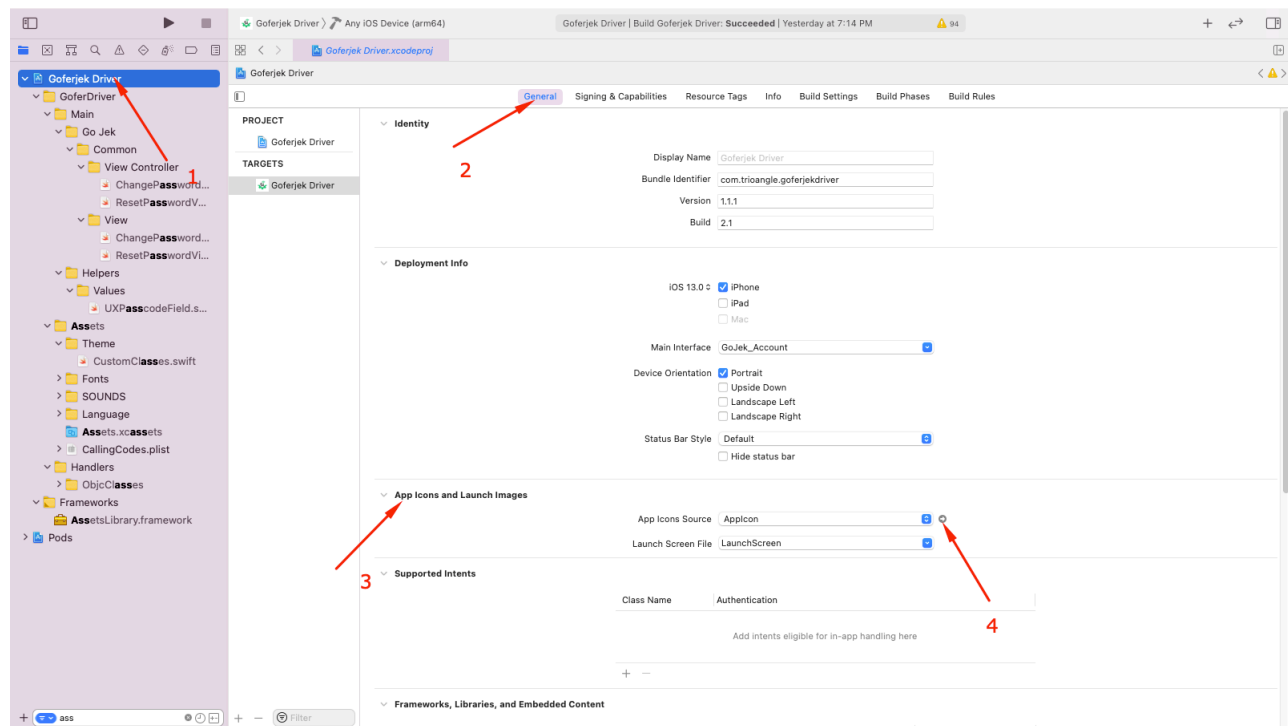

Updating APP Icon

- Updating App Icon.

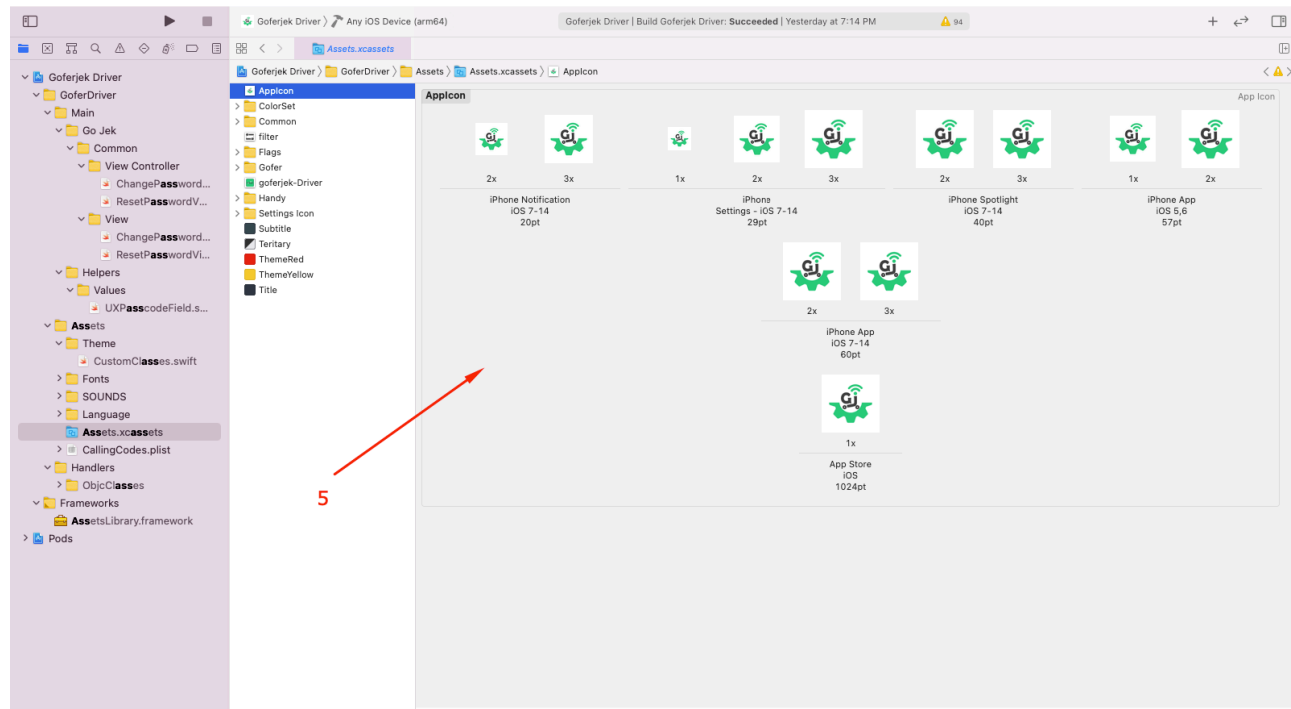

Steps For Updating App Icon

1. Click Goferjek Driver Project
2. Click general tap
3. Below You can see app icons and launch
4. Click arrow icon near app icon source

Reference Below

5. Change/Drag and drops All image according to image size
 - a. To change the app Icon in selected folder
 - b. Use to get all size app icon, follow the link <https://makeappicon.com/>

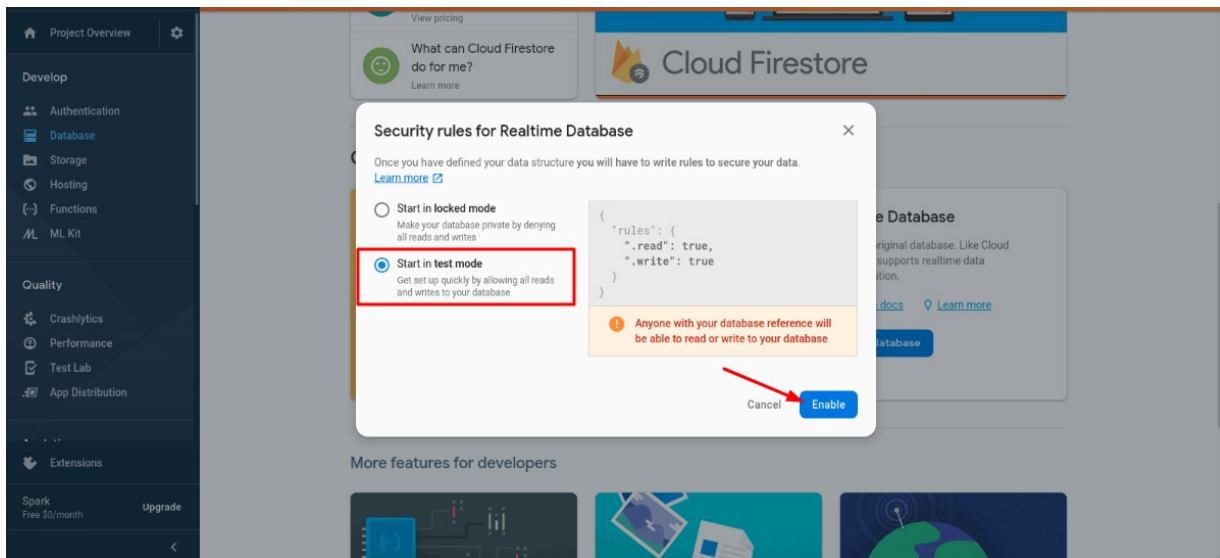

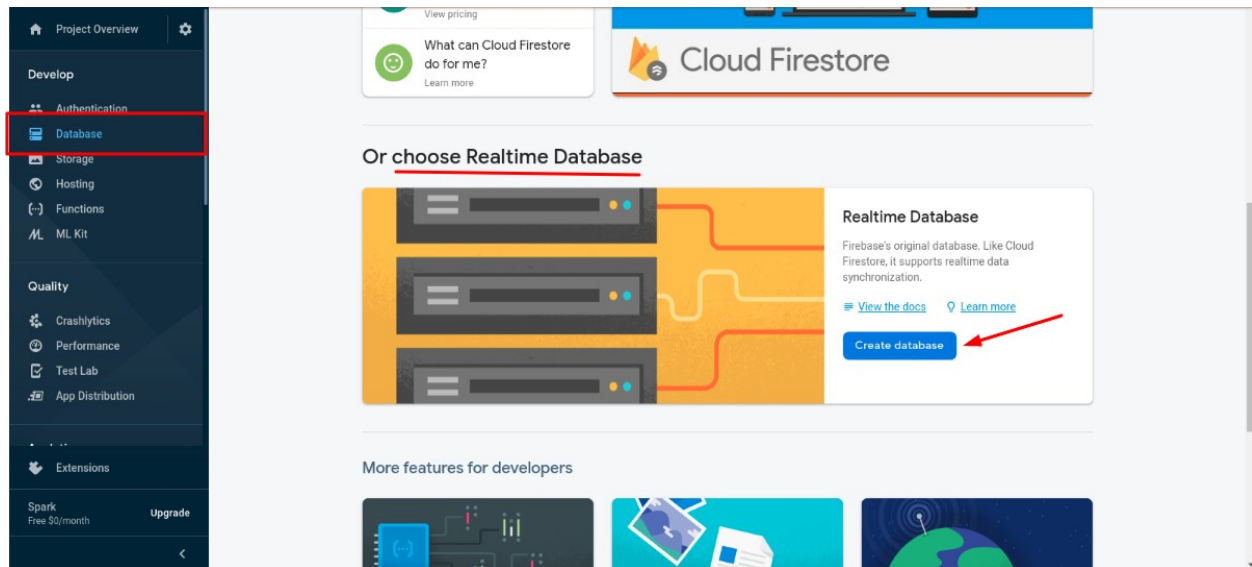

Updating FCM Key (Firebase Cloud Messaging)

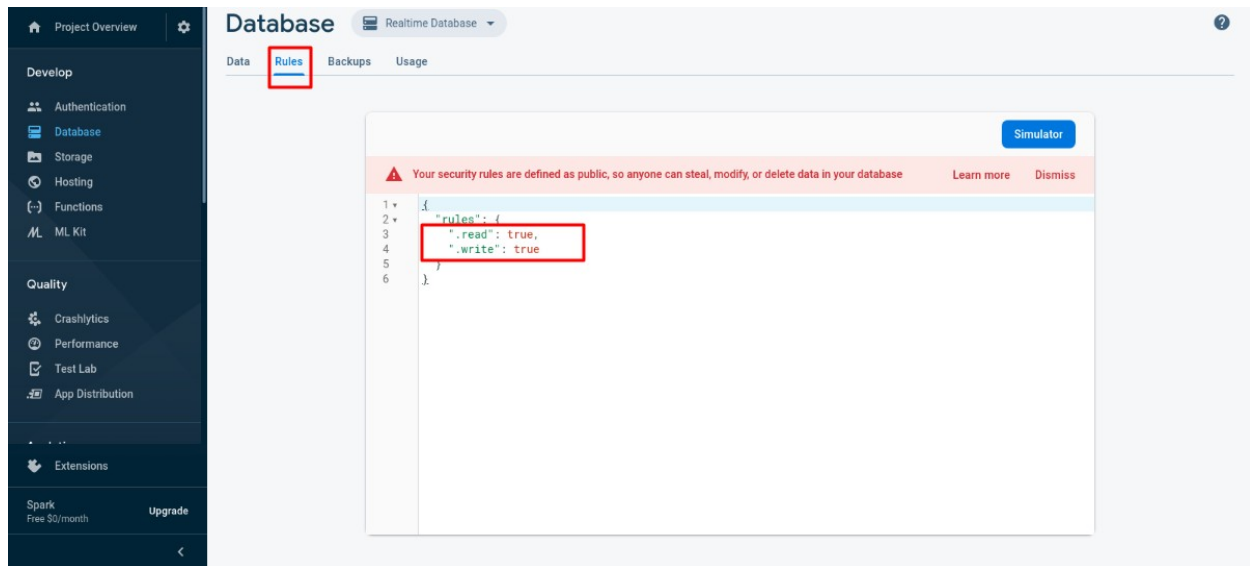

- Get FCM Key used to push notification into different types of Web Application, Mobile Application.
- Follow the link to create FCM <https://console.firebase.google.com>
- Create the project and create both provider and user app
- Click setting in selected app
- Download the **GoogleService-Info.plist** from firebase console

Note:

Use same FCM key in web, android and iOS also.

Configuring Firebase console (Firebase Cloud Messaging)

Update Rules like below :

```
{
  "rules": {
    "live": {
      "Store": {
        ".read": "auth.uid !== null",
        ".write": "auth.uid !== null",
        "$store_id": {
          "uid": {
            ".validate": "(data.exists() && data.val() === newData.val()) || newData.val() === auth.uid"
          },
        }
      },
    },
    "Provider": {
      ".read": "auth.uid !== null",
      ".write": "auth.uid !== null",
      "$provider_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() === newData.val()) || newData.val() === auth.uid"
        },
      }
    },
    "User": {
      ".read": "auth.uid !== null",
      ".write": "auth.uid !== null",
      "$user_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() === newData.val()) || newData.val() === auth.uid"
        },
      }
    }
  }
}
```

```

    },
    "GeoFire": {
      ".read": "auth.uid !== null",
      ".write": "auth.uid !== null",
      "$trip_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() === newData.val()) || newData.val() === auth.uid"
        },
      },
    },
    "driver_rider_trip_chats": {
      ".read": "auth.uid !== null",
      ".write": "auth.uid !== null",
      "$trip_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() === newData.val()) || newData.val() === auth.uid"
        },
      },
    },
    "trip": {
      ".read": "auth.uid !== null",
      ".write": "auth.uid !== null",
      "$trip_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() === newData.val()) || newData.val() === auth.uid"
        },
      },
    },
  },
  "demo": {
    "Store": {
      ".read": "auth.uid !== null",
      ".write": "auth.uid !== null",
      "$store_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() === newData.val()) || newData.val() === auth.uid"
        },
      },
    },
    "Provider": {
      ".read": "auth.uid !== null",
      ".write": "auth.uid !== null",
      "$provider_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() === newData.val()) || newData.val() === auth.uid"
        },
      },
    },
    "User": {
      ".read": "auth.uid !== null",
      ".write": "auth.uid !== null",

```

```

    "$user_id": {
      "uid": {
        ".validate": "(data.exists() && data.val() == newData.val()) || newData.val() == auth.uid"
      },
    },
    "driver_rider_trip_chats": {
      ".read": "auth.uid != null",
      ".write": "auth.uid != null",

      "$trip_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() == newData.val()) || newData.val() == auth.uid"
        },
      },
    },
    "GeoFire": {
      ".read": "auth.uid != null",
      ".write": "auth.uid != null",

      "$trip_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() == newData.val()) || newData.val() == auth.uid"
        },
      },
    },
    "trip": {
      ".read": "auth.uid != null",
      ".write": "auth.uid != null",

      "$trip_id": {
        "uid": {
          ".validate": "(data.exists() && data.val() == newData.val()) || newData.val() == auth.uid"
        },
      },
    },
  },
}

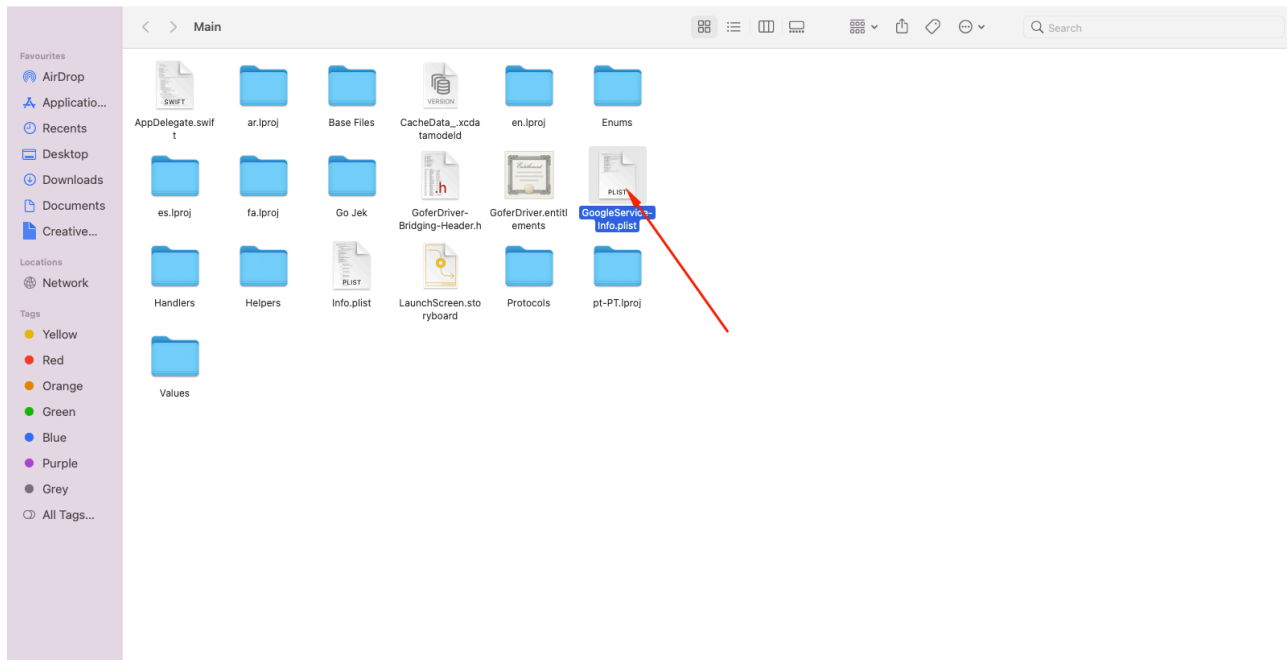

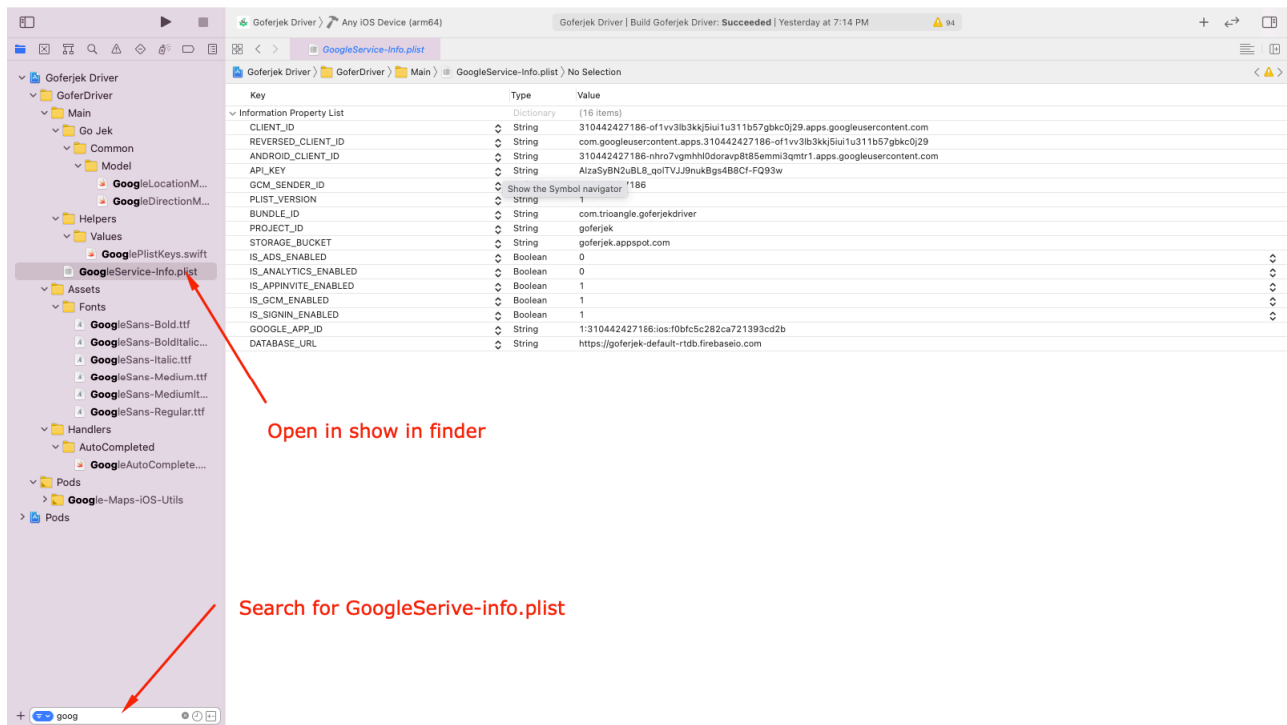

```

Steps To update FCM Key

- Open the Source folder
- And then open project folder (Goferjek Driver)
- Now to place / replace the **GoogleService-Info.plist** file

Reference Below

4. After replacing the file the uninterrupted notification flows between Provider and User.

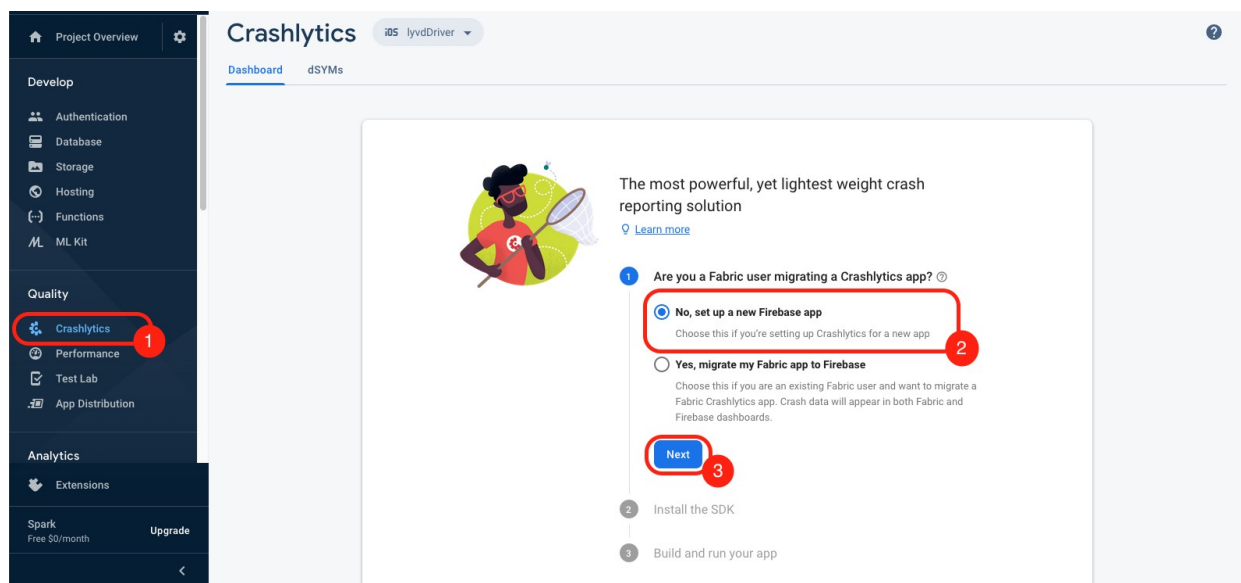

Enabling Crash Analytics

- Setup crash analytics by following below steps

Steps For enabling crash analytics

- Open [firebase console](#)
- Select your application (refer [Crashlytics 1.1](#))
 - a. Select crashlytics
 - b. On step 1 of setup select 'setup new firebase app'
 - c. And proceed till step 3
- Note : [you will need to crash your application to see the crashlytics dashboard]

Reference Below

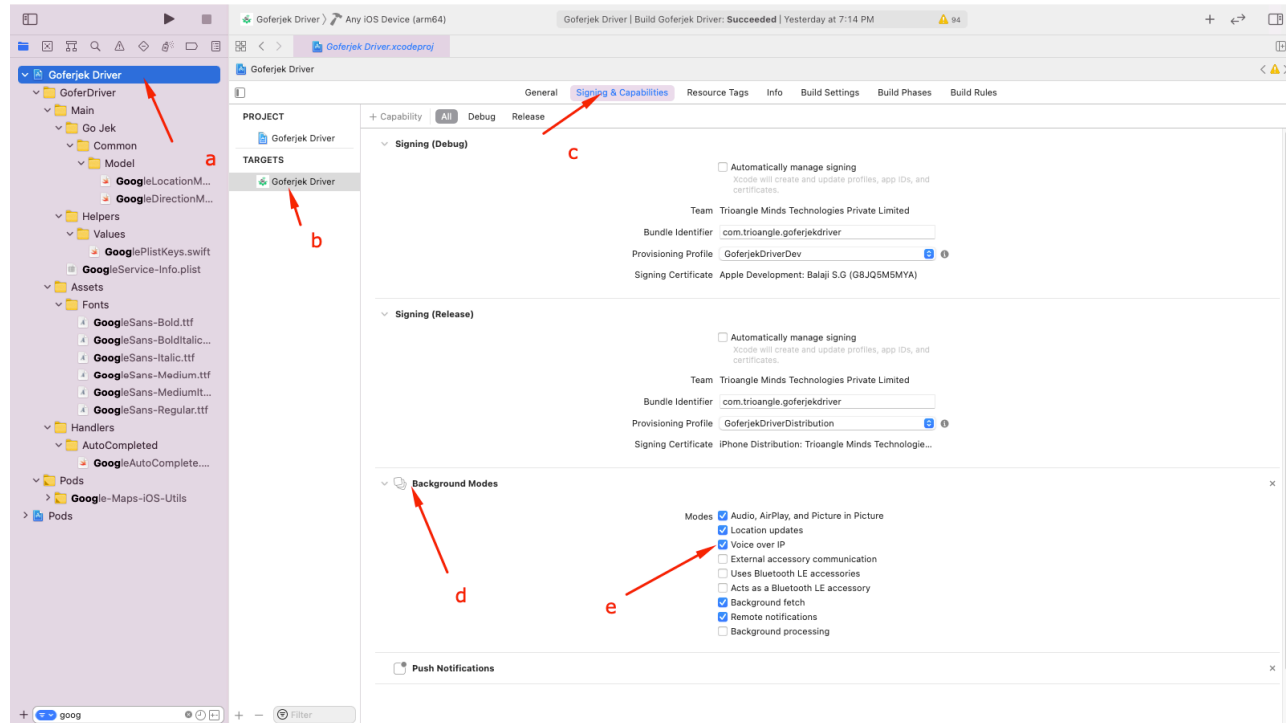

Crashlytics 1.1

API Config document

- Follow the link to get a list of API details (Params and response).
- <https://documenter.getpostman.com/view/10633012/U16opPB2>

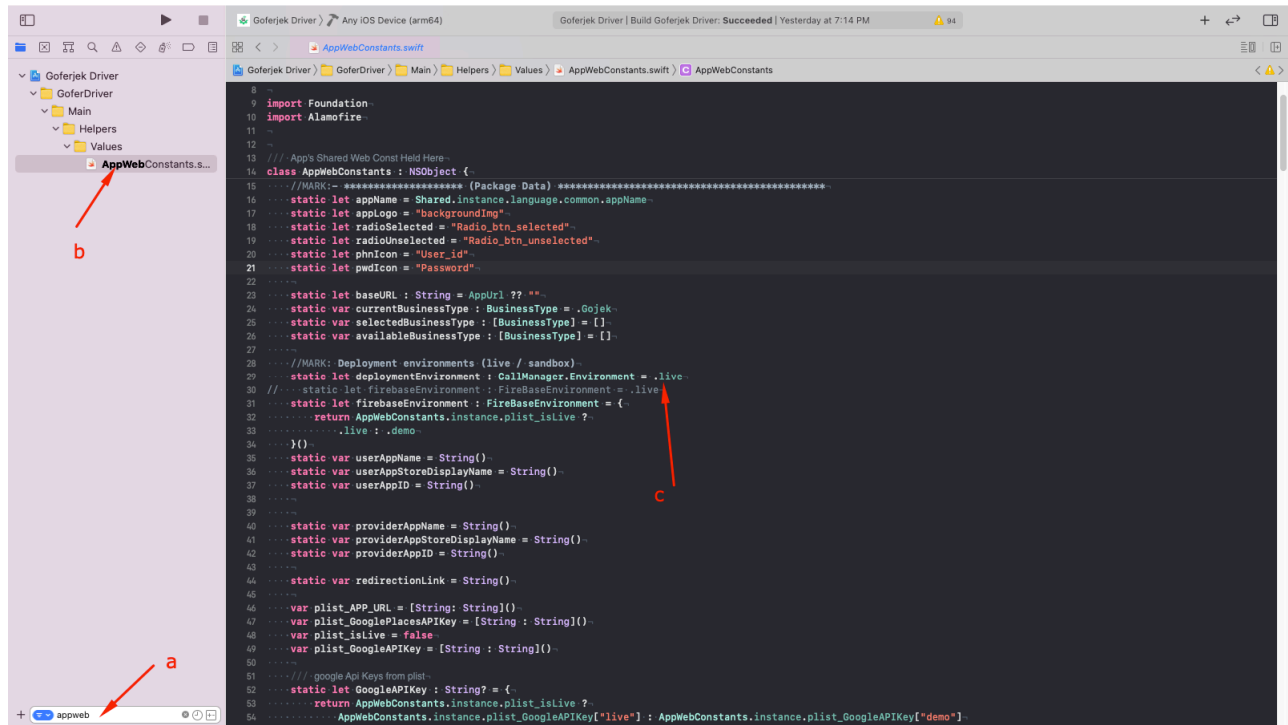

Sinch Call configuration

1. Enable VoIP in Project (Refer below image)

(VoIP Enabling Reference Image)

2. Login To Sinch Admin panel : <https://portal.sinch.com/#/login>
3. Setting up your Apple Push Certificates with Sinch ([for more reference](#))
 - o Login to the Dashboard
 - o Open the Apps tab, select the application of your choice and click on the Push Notification icon on the left-most side.
 - o Drag and drop the certificates associated to your application
 - o If your certificate has a password, enter it and hit Enter
4. Your push notification certificates are now uploaded and ready for use.
5. In Project set “**deploymentEnvironment**” to “**live**” for production. (Refer below image)
 - a. Open Project Search for AppWebConstant.swift
 - b. Select AppWebConstant.swift
 - c. Change the content to live

(Production environment configuration - reference image)

[Recommended : For exact distance calculation, App should be in open status during the job]
